The next milestone for the Becker LNG PowerPac® in the Port of Hamburg

The next important milestone in the development of the Becker LNG PowerPac® is the first operation of two prototypes units of the mobile shore power solution from Becker Marine Systems at HHLA's container terminal Burchardkai in Hamburg.

In attendance of invited guests of national and international container, ro/ro and ferry ports and shipping companies as well as representatives of Hamburg authorities, a twenty-four-hour test run of both prototypes will start on 20th June. Combined, the two units generate three megawatts of clean energy as shore power supply for ships in port. The results of this 24h test and the following tests will be incorporated into the serial design of the Becker LNG PowerPac®.

During the production process of the Becker LNG PowerPac®, the Federal Ministry of Transport and Digital Infrastructure (BMVI) has been an important project partner right from the start. As of 5th June, they have released funds for mobile, containerised solutions for shore power.

(Company profile):

Becker Marine Systems is the market leader for high-performance rudders and energy-saving manoeuvring technology solutions for any type of ship. Becker's products are well-established on the world market and represent the top choice for both super tankers as well as container ships, passenger ferries, large cruise ships and luxury yachts. Additionally, Becker offers a wide range of alternative energy systems for the marine industry. Hybrid Port Energy was founded by Becker Marine Systems with the objective of supplying environmentally-friendly maritime energy and is responsible for the development and sales activities of the Becker LNG PowerPac®.
